Several SoundEffects speakers are designed for corner placement, a position that increases bass volume without requiring additional amplification.

SoundEffects satellites and center channel speaker ensembles have identical voicing. So that sounds move across the soundstage, with no perceptible "hand-off" between speakers.

All SoundEffects speakers are video-shielded, so that they can be positioned alongside a TV without diminishing picture quality.

More than just compatible, SoundEffects products are reconfigurable, so they'll grow with you as your habits and habitats change.

Best of all, SoundEffects products are all JBL products, for the best in performance and reliability.

BigPicture . HotDots . CableMe . Flicks . TimeShift . BandWidth . ChannelSurf . Fiber . SurroundSound . SenseAround .

Array for Hollywood.

SoundEffects movie sound products will energize nearly any home theater by adding enormous high fidelity sound to your existing media mix. Let SoundEffects products lift you to the next movie sound plateau.

SpacePlans . Habitat . Lifestyles . Tools . Wireless . Ubiquitous . WholeHouse . Freedom . RemoteControl . Multichannel .

Simplesonic solutions.

SoundEffects wireless components make home theater installation a snap and remote links from distant speakers to your best components a breeze. Presto! CD-quality sound without wires. Like magic.

You'll find JBL monitors in 7 out of 10 US recording studios, on stage with top concert tours, and installed in the world's most famous arenas.

70% of movie theatres built in the last decade feature JBL loudspeakers. In fact, James Bullough Lansing first brought hi-fidelity sound to moving images in 1928, when his speakers debuted with the first "talkie," The Jazz Singer.

Music 1

Two satellite speakers
Two subwoofers
One WireManager™
Speaker wire

This center channel speaker shares identical voicing with the stereo speakers in Music 1 for seamless home theater sound.

Movies 1

One center channel speaker
Two surround speakers

Magic 1

One RF transmitter
One RF receiver
One Power50 amplifier

The SoundEffects RF transmitter and RF receiver can link the signal from your primary system to a second speaker system virtually anywhere in your home, and power the signal with a 50 watt amplifier.

Music 2

Two satellite speakers
One 100W powered subwoofer
One WireManager™
Speaker wire

Movies 2

One center channel speaker
Two satellite speakers

All five speakers in the Music 2 and Movies 2 ensembles share common voicing for seamless home theater sound.

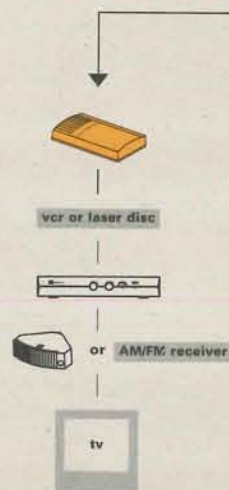

Magic 2

One RF transmitter
One RF receiver
One Power20 amplifier
One Taxi transportable stand

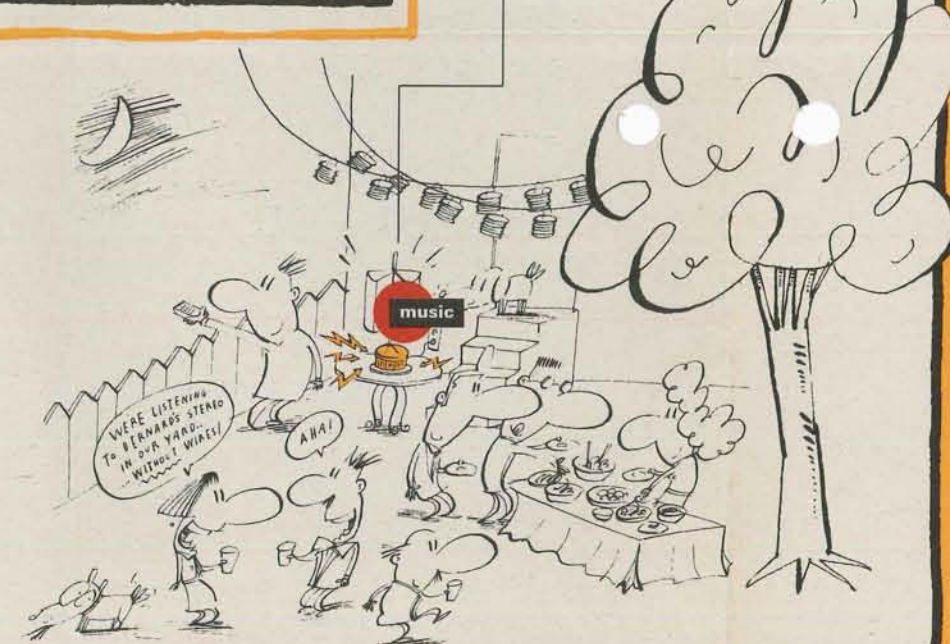

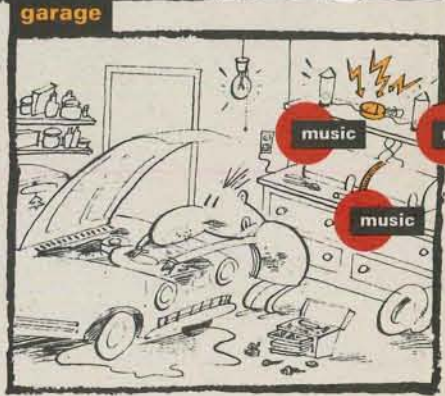

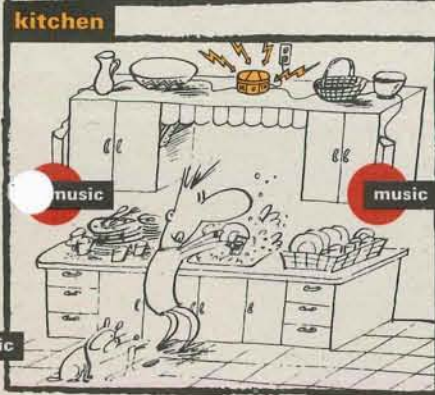

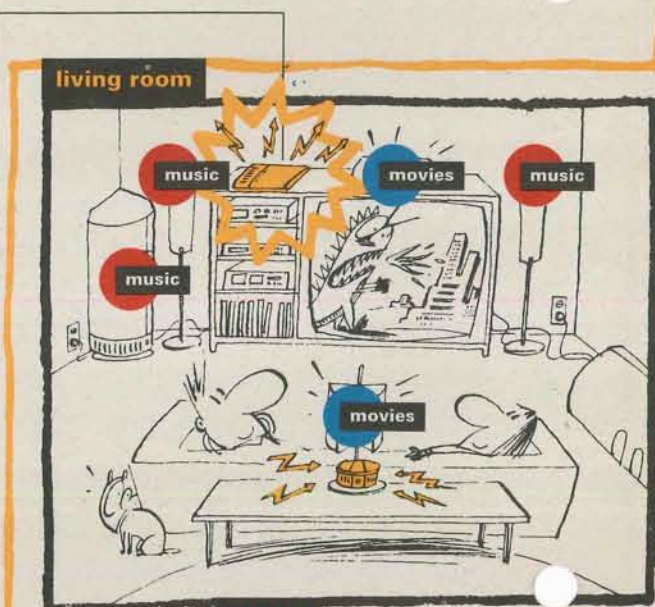

Taxi, SoundEffects' transportable stand, unites two speakers, an amplifier and a wireless RF receiver in a single system, that goes everywhere you go.

CD-quality signals broadcast from the SoundEffects transmitter pass through furniture (for easy-to-install wireless surrounds) and walls (for wireless stereo music) up to 120' away.

Combine the SoundEffects Director, a Dolby® Surround Sound™ processor, with the SoundEffects Power50 or an AM/FM stereo receiver to produce the four channels of amplification you need to fully power a home theater.

SoundEffects products help you put music where you want it, no matter where in your house you spend the most time. These rooms suggest the flexibility of the SoundEffects line. Ask your dealer to help you select specific SoundEffects products that fit the way you live.

The same Taxi ensemble that delivers wireless surround sound to your living room can be easily moved anywhere to provide a CD-quality signal from your best stereo components.
