

ON 40-60 cycle receivers, omit R12 and connect A-B and X-Y.
ON 25 cycle receivers, add R12 and connect X-Y.
Omit R16 when No. 51 dial lamp is used.

General Electric Models J-602, J-603

Tuning Frequency Range 540-1720 KC

Intermediate Frequency 455 KC

Electrical Power Output (117 line volts)

Undistorted 1.0 watts
Maximum 1.5 watts

Loudspeaker—PM Dynamic

Outside Cone Diameter 5 inches
Voice Coil Impedance (400 cycles) .3.5 ohms

Tubes

RF Amplifier	GE-12B7
Converter—Oscillator	GE-12SA7
IF Amplifier	GE-12B7
Detector, Audio, and AVC	GE-12SQ7
Power Output	GE-35L6GT
Rectifier	GE-35Z5GT
Dial Lamp (see paragraph below)	MAZDA #47 or #51

GENERAL INFORMATION

Models J602 and J603 are six-tube AC-DC superheterodyne receivers with Underwriters' Approval listing. The Model J602 is housed in a mahogany plastic cabinet, while the Model J603 has an ivory plastic cabinet.

Both the MAZDA No. 47 and No. 51 dial lamps were used during production. When lamp No. 51 is used, the resistor R16 should be omitted.

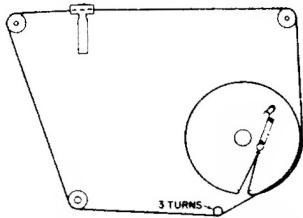

Either the metal or glass type 12B7 tube may be used in the RF or IF stage. However when the glass tube is used in the IF stage, a tube shield must be used to prevent oscillation at the low frequency end of the broadcast band.

ALIGNMENT PROCEDURE

Alignment Frequencies

RF 1500 KC

IF 455 KC

Dial Stringing Diagram

IF Alignment

Connect an output meter across the voice coil. Turn the volume control to maximum. Set test oscillator to 155 KC and keep the oscillator output as low as a readable meter reading will permit.

Apply signal to the 12SA7 converter grid through a .05 mfd. capacitor and align progressively the trimmers in the 2nd and 1st IF transformers.

RF Alignment

When making the following alignment the loop antenna must be bolted to the chassis by the screw and spacer mounting. The RF signal should be capacity coupled to the receiver loop by placing a two-foot piece of wire for an antenna on the test oscillator output post (high side). Keeping this antenna two feet or more from the receiver loop will generally insure freedom from too much coupling. Metal objects such as meters, tools, etc., should not be placed in close proximity to the loop when making this alignment.

With the gang condenser plates completely closed, the pointer should line up with the first mark on the left of the scale. Set the signal generator to 1500 KC. Align (C-1b) to the signal while the pointer is on the 1500 KC mark. Peak (C-1a) for maximum output.

Stock No.	Symbol	Description
