

HEXFET® POWER MOSFET PHOTOVOLTAIC RELAY

Series PVT422

Microelectronic
Power IC Relay
Dual Pole, Normally Open
0-400V, 120mA AC/DC

General Description

The PVT422 Series Photovoltaic Relay is a dual-pole, normally open solid-state relay that can replace electromechanical relays in many applications. It utilizes International Rectifier's HEXFET power MOSFET as the output switch, driven by an integrated circuit photovoltaic generator of novel construction. The output switch is controlled by radiation from a GaAlAs light emitting diode (LED) which is optically isolated from the photovoltaic generator.

Series PVT422 Relays are packaged in an 8-pin, molded DIP package with either thru-hole or "gull-wing" surface mount terminals. It is available in standard plastic shipping tubes or on tape-and-reel. Refer to Part Identification information.
